

We provide a complete design & development service that takes a new product from initial concept through to commercial launch.

Design Brief

- After the initial client meetings the design brief specifies the design intent of the project for our team of designers and engineers.

Product Concept Development

- Our design team develops the product idea further to suit market needs, functionality and ergonomics.

Engineering Design

- All of our designs are developed using 3D CAD software by our team of experienced engineers.

Intellectual Property

- We perform patent searches, research possible patent opportunities and apply for Registered Community Designs for all new product designs.

Prototyping

- We have a range of in-house facilities to produce functional or non-working prototypes of your product for evaluation before going to production.

Feasibility Report

- Our production costings are combined with the technical design and market research to determine product viability.

Packaging

- We design and develop plain or branded packaging for the display and transport of your product.

Manufacture

- We outsource to a wide range of manufacturing companies in Europe and the Far East to ensure product quality and delivery.
